

Have you been diagnosed with Lynch Syndrome?

Consider Joining Our Study!

The Muir-Torre and Lynch Syndrome Study will look at DNA from both healthy cells and cancer cells in the same person to learn how normal cells become cancerous.

Who can join?

Anyone who...

- is 18 years or older,
- has been diagnosed with either Lynch or Muir-Torre Syndrome,
- and receives regular colonoscopies at UC Davis Health.

Your participation in this study can...

Help researchers understand why some cells cannot fix DNA mistakes correctly

Improve knowledge that advances care for the next generations

Support the development of better ways to detect and treat cancer for yourself, your family, and the Lynch Syndrome community
